Project Title:

PNW Floor Design App — Smart Consultation, Project Tracking & Home Visualization

Overview / Topic Selection

PNW Floor Design LLC serves homeowners across the Pacific Northwest with personalized tile, flooring, and interior design services. Clients often struggle with choosing materials, visualizing products, understanding pricing, and managing multiple steps of renovation. This app solves these challenges by bringing the entire design workflow into a single mobile experience.

The app allows users to:

- Browse curated tile, wood, and carpet collections
- Upload home photos for instant previews (AR + AI)
- Book consultations with designers
- Track installation timelines
- Communicate directly with PNW (chat, calls, approvals)
- Control compatible smart-heated floors (IoT integration)
- Receive reminders about prep steps (moving furniture, packing items)

This app enhances the client's experience and elevates PNW Floor Design into a smart, modern, digital-first design studio.

Importance of Topic

The home renovation process is overwhelming for most homeowners. They often feel confused about materials, scheduling, costs, and communication with installers. The app provides clarity, reduces miscommunication, and increases client satisfaction — an essential part of PNW Floor Design's reputation.

2. Problem & Solution Statements

Problem Statement

Homeowners struggle to plan renovation projects because they cannot visualize different tile and flooring options in their home, do not understand the steps involved, and must manage communication across multiple contractors. This leads to delays, frustration, and poor decision-

making. Most existing design apps do not include project tracking, scheduling, smart home integration, or direct communication with a designer.

Solution Statement

The PNW Floor Design App provides a centralized, intuitive platform where users can visualize flooring using AR/AI tools, book consultations, track project timelines, manage documents and invoices, communicate with their designer, and monitor compatible heated flooring systems. This creates a seamless, guided renovation experience and elevates the professionalism of the design service.

3. Competitive Analysis

Competitor 1: Houzz

Strengths: large photo library, strong inspiration boards.

Weaknesses: too broad, overwhelming, no personal designer connection.

Competitor 2: Floor & Decor App

Strengths: product browsing, store locator, helpful filters.

Weaknesses: no AR visualization, no project tracking, no personal guidance.

Competitor 3: Home Depot App

Strengths: huge inventory, basic AR.

Weaknesses: impersonal, not design-focused, no communication or scheduling features.

Key Gap:

None of these apps offer **personalized designer-client workflow** combined with **smart home compatibility**.

PNW Floor Design fills this gap.

4. Trend Research (UX + Technology)

AR Visualization

Apps increasingly use AR to preview materials in real rooms. This feature is essential for modern design tools.

AI Recommendations

Design prediction tools (color matching, mood analysis, space optimization) are trending in home design apps.

Smart Home Integration

Users expect mobile control of heated floors, lighting, and humidity systems — relevant for PNW projects with heated floors and tile installations.

Customer Self-Service Tools

Chat, pricing estimates, timeline tracking, and portal-style dashboards are industry standards for professional service apps.

5. Target Audience & Personas

Persona 1: “The Busy Homeowner” – Grace Clark

- **Age:** 48
 - **Location:** Tacoma / Gig Harbor
 - **Income:** \$120K+
 - **Needs:** clear direction, fast decisions, reassurance
 - **Pain Points:** overwhelmed with choices, forgets deadlines, miscommunication
 - **Opportunity Story:**
She wants a designer she can trust and a system that tells her exactly what to do and when. The app gives her structure.
-

Persona 2: “The First-Time Renovator” – Cameron Clark

- **Age:** 28
- **Location:** Bremerton
- **Income:** \$65K
- **Needs:** simple, modern, clear instructions
- **Pain Points:** doesn't understand tile materials, budgets, or installation
- **Opportunity Story:**
He wants to preview materials in his own space and make decisions without stress. The app reduces confusion and speeds up projects.

6. Sitemap (6–10 Screens)

1. **Onboarding / Login**
2. **Home Dashboard**
3. **Material Library**
 - Tile
 - Wood
 - Carpet
4. **AR Visualization Tool**
5. **Book Consultation**
6. **Project Timeline Tracking**
 - Quotes
 - Approvals
 - Installation dates
7. **Chat with Designer**
8. **Invoices & Payments**
9. **Heated Floor Control (Smart Home Integration)**
10. **Profile & Settings**

7. Moodboard Description

The moodboard includes:

- Pacific Northwest colors: forest green, charcoal, mist grey, and muted blush
- Modern minimalist UI references (Apple Home, Nest, Alexa)
- Tiles, wood grains, checkerboard layouts
- Clean white space for luxury feeling
- Soft shadows and rounded corners to match high-end brand identity
- Icons for tools: tile cutter, tape measure, AR grid, heat symbol
- Lifestyle imagery: cozy bathrooms, modern kitchens, large windows, natural light

Overall visual tone: **luxury + nature + clarity.**

8. Low-Fidelity Wireframes (Concept Sketch Descriptions)

Screen 1 — Home Dashboard

- Top navigation: profile + notifications
- Large tile preview grid
- Quick shortcuts: AR View, Book, Track Project, Heated Floors

Screen 2 — Material Library

- Tabs for Tile / Wood / Carpet
- Simple card-style product previews
- Filter drawer for size, material, color

Screen 3 — AR Visualization

- Live camera view
- Button: “Place Tile”
- Grid overlay
- Compare Before/After

Screen 4 — Book Consultation

- Calendar view
- Time selection
- Confirmation card

Screen 5 — Project Timeline

- Vertical progress bar
- Sections: Measure → Selection → Order → Install → Final Walk
- Status indicators

Screen 6 — Heated Floors Smart Control

- Temperature slider
- Schedule
- Zones (Bathroom, Hallway, Kitchen)

These wireframes focus on **clarity, simplicity, and functional hierarchy**.
